Thermal Conductive Heating (TCH): comparison of power consumption to heat the soil between electrical resistance and gas fired burners

J. DE GRUNNE, H. SAADAOUI, J. HAEMERS. HAEMERS Technologies 2018 ©

Conclusion
- The energy consumption to heat the soil depends on the type of thermal electricity production (thermal, nuclear, etc).
- Depending on the current sources of electricity production, the power consumption in terms of natural gas will vary.
